* Due to rounding, sum of individual items may not equal totals. Estimates include all full-time or part-time wage and salary employees who worked or received pay during the week including the 12th of the month. Nonagricultural self-employed, unpaid family workers, and domestics are excluded. Estimates based on December 1981 benchmark utilizing 1972 Standard Industrial Classification Coding. Data compiled in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics. March 1983.

* Due to rounding, sum of individual items may not equal totals. Estimates include all full-time or part-time wage and salary employees who worked or received pay during the week including the 12th of the month. Nonagricultural self-employed, unpaid family workers, and domestics are excluded. Estimates based on March 1981 benchmark utilizing 1972 Standard Industrial Classification Coding. Data compiled in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics. January 1982.

* Prepared in cooperation with the Bureau of Labor Statistics. Averages are based upon data for full and part-time production and related workers, including the nonsupervisory employees and working supervisors who were employed during the pay period including the 12th of the month. These average earnings are computed on a "gross" basis and may reflect changes in premium pay for overtime and late shift work as well as changes in basic hourly and incentive wage rates. Average hourly earnings are not wage rates but are averages of gross earnings of all employees below the administrative level.

Colorado Trends

Further improvement was noted in State labor market conditions between the last month of 1983 and the first month of 1984. Colorado's seasonally adjusted unemployment rate dropped to 5.6 percent in January, down from the revised December mark of 5.8. Joblessness has not been that low since October 1981.

Summary labor force statistics for 1983 have recently become available and indicate that the year just past was a very strong recovery period. In fact, the economic upturn in Colorado outpaced most of the nation as only eight states managed lower annual jobless rates. Unemployment in Colorado during 1983 stood at 6.6 percent of the labor force, much better than the 7.7 recorded one year prior. The number of Coloradans without work declined to 110,000, down 13,000 from 1982 but still the second highest annual level ever recorded. Job growth in the State was notable with 90,000 additional workers finding employment. That is up considerably from the 12,000 increase in 1982 and 41,000 in 1981.

Recently revised statistics show that after peaking at 8.5 percent in September and October 1982, unemployment has been on a downward trend in the State. Just one year ago, in January 1983, the Colorado unemployment rate was more than two full percentage points higher than the present level.

The adjusted number of jobless declined by 1,100 between December and January, falling to 95,400. A year ago 127,700 were unemployed.

Seasonally adjusted Colorado employment climbed to an all-time high of 1,597,000 during January, surpassing the previous record reached just last October by over 15,000. If preliminary figures hold up, the 19,600 adjusted gain in jobs between December and January will be the largest monthly increase in eight years and another indicator of a very positive beginning to the new year.

Total Colorado employment is now a substantial 91,300 ahead of the January 1983 mark.

National labor market statistics also continued to improve in January. The adjusted unemployment rate for civilian workers maintained its downward trend from the November 1982 recession trough of 10.7 percent moving to 8.0 percent for the current month. The number of jobless persons declined by 2.9 million over the same time period to 9.0 million. According to the federal Bureau of Labor Statistics, significant drops in unemployment have been recorded for all major demographic groups except black youth. Civilian employment continued to rise in January but at a slower

pace than in the prior two months. At 103.2 million, the number of workers in the U.S. has advanced 4.2 million since November 1982.

All Colorado industries recorded at least small actual job losses in January. But those declines were generally less than their seasonal norms and that translated into the large monthly gain for the seasonally adjusted employment series.

The largest January loss appeared in trade, down 11,000 due to the usual post-December holidays slowdown. That decline, however, is still more than 1,000 jobs less than usually expected. The bulk of the downturn was recorded in eating and drinking places and general merchandise stores, together showing a contraction of 6,500 workers. The hiring of new food store workers in the Denver area helped mitigate the drop.

Government lost 7,000 jobs primarily due to the year-end break at many state and local educational institutions. Agricultural employment dropped 6,300 as the industry neared its normal winter low point. And construction was down by 4,600, some 3,000 less than the customary January downturn.

Even though it recorded a loss of 600 workers, manufacturing employment looked particularly upbeat in January. The usual decline for this time of year is nearly three times that amount. The electrical equipment (up 300) and primary metals (up 200) sectors recorded the most job growth for the period.

Despite the current seasonal decline, most industries are well above their year-ago levels. The two exceptions are mining, with a loss of 500 workers due to continued weakness in the metals and oil sectors, and agriculture, where a long-term trend continues with an annual decline of 200. Services is a substantial 11,600 above last year; trade is up by 8,800; manufacturing is up by 7,000; and construction shows a 2,200 job increase.

Overall, the Colorado economy appeared to be in good shape during January and there is certainly potential for further expansion in upcoming months. Some slowing is expected in the rate of improvement, but generally positive conditions should prevail.

The amount of money tourists spend in Colorado is projected by industry expects to increase by 11 percent in 1984. Slight declines have been recorded for the past two years.

A number of large construction projects have been announced in recent months. King Soopers will be the anchor tenant in the $21 million, 24-acre development in Colorado Springs to be called Mission Trace. Three hotel-convention centers with a total cost of some $100 million are slated for the Southeast Denver area. And the $260 million Tabor Center development in Downtown Denver continues ahead of schedule with the 430-room luxury Westin Hotel planned for completion in mid-November.

DENVER AREA UNEMPLOYMENT RATE DOWN SLIGHTLY IN JANUARY

The seasonally adjusted unemployment rate in the DENVER-BOULDER LMA edged down over the month to 4.8 percent from the 4.9 percent posted in December of last year. The number of unemployed fell 500 to 48,900 between December and January. Current unemployment is some 15,500 below last year's level and the unemployment rate is down considerably from the 6.6 percent rate registered in January 1983.

Total employment in the Metro Area jumped a healthy 13,300 in January to a record 966,600, the largest one month increase since a 23,100 worker gain in January 1976. Employment is 58,500 above its level of one year earlier. Job gains have been greatest in services (up 7,700), manufacturing (up 6,200) and wholesale and retail trade (up 6,200).

In other news developments, consumer prices in the Denver Area as measured by the All Urban Consumer Price Index (CPI-U) increased 0.9 percent in the two months between November 1983 and January 1984. The rise, at an annual rate of 5.4 percent, is only slightly higher than the 4.7 percent increase in prices that occurred over the past twelve months. In the just completed twelve month period prices displayed a substantial deceleration from the increases in the prior twelve month period. Between January 1982 and January 1983 the index of all items advanced 7.2 percent compared to the 4.7 percent rise recorded in the past year. The biggest slowdown occurred in housing where prices were going up at a 10.1 percent clip in 1982 before dropping to a 3.8 percent increase in 1983. Lowering housing was gas (piped) and electricity. After rising 12.1 percent in 1982 it registered a 7.7 percent price decline in 1983. Medical care, where costs have soared in recent years, finally showed evidence of slowing. The percent increase dropped from 11.4 percent in 1982 to 6.9 percent in 1983. Two categories showed a speeding up of price gains last year. Food and beverages went up from 2.3 percent to 5.8 percent, due primarily to higher prices for meats, fruits and vegetables caused by last summer's drought and freezes this past winter. Also accelerating were transportation costs (up from 2.6 percent in 1982 to 5.1 percent in 1983). While gasoline prices held steady throughout most of last year, public transportation costs surged from a 1.3 percent gain in 1982 to a whopping 25.4 percent increase in 1983.

An indicator of increasing economic strength in the Denver Metro Area over the past year has been the rise in the number of hours worked in manufacturing. Weekly hours of production workers averaged 40.3 in January compared to 39.0 one year earlier, but were down from December's 41.5. Based on the strong January employment gains, employers may now be electing to hire additional workers instead of having employees work more overtime hours.

Printing and publishing jobs in Denver are up 300 in the past year to 12,900.

The Colorado Business Composite

The State's index of leading economic indicators started the new year on an encouraging note, advancing 0.5 percent in January to 153.7. The gain in the Colorado Business Composite (CBC) over the month is a welcome sign. However, the index is still below its June 1983 level of 153.9 and its behavior since then has pointed toward a gradual moderation in statewide growth.

Improvement in the labor market fell just short of spectacular last month. Total employment in the State climbed 19,600 in January to a record 1,597,000, making it the largest one month gain since a 24,800 worker increase in January 1976. The gain in the current period as with the gain in 1976 occurred at nearly the same point in the business cycle, approximately one year after the end of a major recession. The burst of employment growth in the first month of 1976 was followed by a gradual slowing of growth in the remainder of that year. A similar pattern is expected to emerge soon and continue through most of 1984.

What will cause this to happen when most analysts at the moment are fearful that the economy is overheating? Most economic indicators on the U.S. economy for January were truly bullish. Strong gains were registered for employment, income, retail sales and industrial production. But the weakness in the stock market in January, February and early March suggest that the growth rate in the economy is peaking during the current quarter. The lone factor which only now is bringing an end to the initial thrust of rapid growth that has taken place since the end of the recession in late 1982 is a more restrictive monetary policy that was implemented by the Federal Re-

1/ For a detailed explanation of the CBC, see the technical report by authors Larson and Wojahn in the July 1983 issue of the Colorado Labor Force Review, Vol. XX, No. 7.
2/ Break in series due to expanded coverage of Colorado bank deposits component.

serve Board (FED) last Spring. *Regardless of what has been said or written about FED policy or growth in M1, growth in the broader measure of money supply, M2, has risen at an annual rate of only 2½ percent in current dollars since June 1983, well below the lower limit of the FED's target range.* At the same time, the rate on federal funds which are reserves banks lend each other overnight, has risen from slightly above 8 1/2 percent in May of 1983 to 9 3/4 percent currently. Periods of slow or declining rates of money growth usually begin to impact the economy within nine months of their onset.

Of course there would be some obvious benefits of slower growth now. A slowing rate of growth in the economy would take the pressure off interest rates which have been on the rise recently and most likely ensure that the U.S. expansion would last at least through the end of 1985.

Of the six component indicators comprising the CBC only one declined during January. The stock market index of 30 regional firms fell more than 4 percent over the month from 270.64 in December to 259.36. The loss was the index's second in as many months.

The big gainer in January was private housing permits. Statewide permits soared over 40 percent to 5,106 from 3,611 the month before. Some of this apparent gain may be more reflective of the bitter cold December weather we experienced than any significant strengthing in activity in this sector, however.

Also showing a sizable increase were Colorado bank deposits. Total deposits at financial institutions in the State after adjustment for inflation were up 2 1/2 percent from $10.468 billion the last month of 1983 to $10.741 billion in January 1984.

NOTE: Data series are seasonally adjusted except for those series that appear to contain no seasonal movement. Unadjusted series are indicated by an *. Data is provided for a ten year period. Prior data to 1970 can be obtained by contacting Area Labor Information, Colorado Division of Employment and Training.

1/ Data on net business incorporations and net business telephones make up the net business formation index. Data is smoothed by a 6-month moving average. Weights were derived to equalize the differences in the average monthly percentage changes among the two series in order to minimize dominance by the more volatile series when combined. 2/ This series is a weighted 4-term moving average (with weights 1, 2, 2, 1) placed on the terminal month of the span. a/Break in series. Coverage expanded from Federal Reserve member banks to all depository institutions. b/ Additional reporters. c/ Series on net business telephone lines expanded to include data for equipment owned by customers but serviced by US West.

ANNUAL BENCHMARKS INTRODUCED

Revised Industry Employment

This issue of the Colorado Labor Force Review introduces the March 1983 benchmark in estimates of industry employment for Colorado and the Denver-Boulder Labor Market Area. Previous data was produced with a December 1981 benchmark. The introduction of this updated material affects industry employment estimates and hours and earnings data back to January 1982.

The industry employment series is produced by the Colorado Division of Employment and Training in cooperation with the federal Bureau of Labor Statistics under the Current Employment Statistics (CES) program. The monthly estimates for Colorado and the Denver Metro Area are based on a sample survey of about 2,700 employers across the State. Periodically, these sample based estimates are benchmarked to actual tabulations of employment for firms covered by the Colorado Employment Security Act as well as other employment data sources.

Ideally there should be no difference between the original employment estimate and its corresponding benchmark. Efforts are continually being made in the areas of sample expansion and procedural refinements to try to reach that goal. Maintaining a good, representative sampling of employers, however,can be difficult, particularly as participation in the CES program is purely voluntary.

Industry employment estimates made by this office for areas other than the State as a whole and the Denver-Boulder Area have been revised as far back as January 1980. (These series do not regularly appear in the Review.) Adequate sample surveys do not exist for these areas so other estimating techniques are used to produce current employment data.

Revised Labor Force Data

The benchmarking of industry figures also affects data on the labor force since that material is used in the computation of total resident employment, but labor force estimates are also subject to another revision.

Once each year monthly Colorado labor force estimates are benchmarked to annual average employment and unemployment levels from the Current Population Survey. This monthly survey of approximately 60,000 U.S. households is used to estimate the national labor force. In Colorado, survey data is gathered from nearly 1,000 households. Frequently the benchmarking procedure results in at least small revisions to much of the historical labor force series for the State--and since the sum of all areas in the State must equal the Colorado total, sub-state areas. The introduction of the 1983 Current Population Survey into Colorado labor force statistics revises data for all areas back to 1976.

Labor force, industry employment and hours and earnings figures back to 1980 are provided in the data supplement accompaning this issue of the Review. More historical information is available upon request.

Government	135.5	134.1	1.4

Estimates made in cooperation with the U.S. Dept. of Labor, Bureau of Labor Statistics. Labor force data adjusted to the 1983 Current Population Survey.

1/ Total resident employment includes nonagricultural wage and salary workers; self-employed, unpaid family and domestic workers, agricultural workers and persons involved in labor disputes.

2/ Due to rounding sum of individual items may not equal total. Industry data represents jobs by place of work coded under 1972 SIC's. Industry data revised using March 1983 benchmark.

3/ Includes Adams, Arapahoe, Boulder, Clear Creek, Denver, Douglas, Gilpin and Jefferson Counties.

1/ Recurrent yearly movements in Colorado labor force data associated with the Current Population Survey have been isolated and removed by the X-11 Variant of the Census Method II Seasonal Adjustment Program. 2/ Detail may not add to totals because industry data series have been independently adjusted. Effects of irregularities, such as unseasonable weather, strikes, etc. on the trend-cycle component of individual series have been reduced by graduated treatment of extremes.
